

**Installation Instructions for TLC602R
Toyota Landcruiser HJ/FJ 60-62
150L Replacement Tank**

1. Remove spare wheel carrier and standard fuel tank from vehicle. Remove fuel sender unit from tank, extend float arm by 125mm (the rod in the fitting kit is 145mm long to allow for a 10mm overlap on each joint.) Fit sender unit to new tank and check full/empty travel of float arm. Screw brass fittings into tank as per diagram.
2. Bolt the two new secondary brackets from the kit into position of the original rear tank strap mounting hole.
3. Lift tank into position. Before tank is all the way in place feed the 6mm vent hoses from the left hand side of the tank over the top of the tank to the right hand side (be careful that the hoses do not become wedged between the tank and the floor pan braces). Secure the front of the tank with the original bolts and the rear of the tank with the new M10 x 30 bolts and Nyloc nuts.
4. Connect all remaining hoses as per diagram, refill tank with fuel and check all hoses and fittings.
